Agent-based Provisioning

> An agent (windows service, linux daemon) installed to the local environment brokers Provisioning transaction requests between Okta and the on-premise resource.

> Currently Supported Provisioning agents > Active Directory

> LDAP

> On Premise Provisioning

> This agent is generic and intended to connect to any On-Prem resource that can use the SCIM (Secure Cross-domain Identity Management) language.

> This typically involves code and a Professional Services Statement Of Work

> For more information, consult our On Premises Provisioning Deployment Guide

> This is a good, robust strategy. However, it is limited to on-premise applications.
